

# **M4DCAT Token (MCT)**

## **Whitepaper**

Version 0.3 - 2nd July 2021

M4DCAT Token (SPACE) is an innovative Binance Smart Chain Token that maximizes profit with DeFi Yield Generation and Crypto Earning Systems. M4DCAT Token has been created with a progressive, automatic burn mechanism to create a bridge between our product and our goals.

# Abstract

## 1- Decentralized Finance Context

Decentralized Finance (DeFi) refers to an ecosystem of financial applications that are built on top of a blockchain. Its common goal is to develop and operate in a decentralized way, without intermediaries.

According to DeFi Pulse the amount of money invested in DeFi projects soared from about \$950 million in the latter part of May 2020 to more than \$9.5 billion by the first week of September of the same year and have already been deployed (locked-in) across a variety of DeFi applications that offer decentralized exchange, staking, liquidity mining, lending and borrowing, monetary banking (e.g. the issuance of stablecoins), tokenization, or other financial instruments such as derivatives and prediction markets. In that sense, DeFi is about creating a network of financial services that seamlessly function without the need for intermediaries that could hold an unfair and inefficient controlling stake in the operation of the system.

However, cryptocurrency and decentralized finance are new concepts that can be confusing and risky for customers to get involved with. Proposed tools are complex and young, which hinders access to mainstream adoption. Early 2021, we cannot yet call this financial architecture “open finance” - when new users have to pass through difficult loops to participate — hence, the need for simplified interfaces that democratize DeFi and make it accessible to a larger audience.

## 2- Crypto Faucets Context

A crypto faucet is an app or a website that distributes small amounts of cryptocurrencies as a reward for completing easy tasks. However, in the case of crypto faucets, tiny amounts of free or earned cryptocurrency are sent to a user's wallet. In order to get free crypto, users need to complete tasks as simple as viewing ads, watching product videos, completing quizzes and surveys, clicking links or completing a captcha.

Though cryptocurrencies have had great last years, they are yet not completely mainstream and are still new to many people around the world. The idea behind crypto faucets is to give free cryptocurrencies to people so they would take the time to learn about digital assets and hopefully invest in them.

### 3- Next Gen Crypto Faucets

Usually, users need to register on a crypto faucet by entering their details along with the wallet address. After solving a task on the website, the reward earned goes to a **micro wallet** : a wallet similar to traditional wallets, but one which is capable of collecting small amounts of crypto assets by using off-chain mechanism. This way permits to avoid blockchain network fee as it uses API endpoints to execute micro-transactions.

Micro Wallets are useful to collect micro-amounts of High Fee Coins like Bitcoin or Ethereum but their interest decreases when it comes to collecting other coin with low fees, as the fee is lower, the minimum required to withdraw from crypto faucets can be lower too.

That is why Some Crypto Faucet chosen to integrate an internal wallet to permits users withdrawing their crypto directly to the blockchain. **It is the case of Final Autoclaim.**

### 4- Binance Smart Chain: A Bridge Between DeFi and Crypto Faucets

Due to its fully functional network with high scalability, quite low transaction fees, and 3-second block times, **Binance Smart Chain (BSC) has become a leader among Ethereum rivals.**

Binance Smart Chain is the second blockchain launched by the cryptocurrency exchange Binance. The First Binance Blockchain (Binance Chain) lacks most of Ethereum's functionality and flexibility, while the Binance Smart Chain is compatible with the Ethereum Virtual Machine (EVM) and supports smart contracts.

As a result, developers can launch their Ethereum DApps on the Binance Smart Chain with minimal configuration, allowing many crypto projects to migrate quickly to the latter chain to avoid ETH's high transaction fees.

Binance Smart Chain has seen immense popularity since the beginning of 2021, thanks in part to congestion issues and high transaction fees on the Ethereum network. All of this has caused many developers and investors to seek alternatives such as BSC.

In February 2021, the BSC community made the network even more attractive to new users as a low-cost and stable alternative, doing so by reducing its gas fees from 15 Gwei to 10 Gwei. This is to counteract the sharp increase in the price of the Binance Coin (BNB), which exceeded \$300 in February 2021.

This is why Binance Smart Chain is actually a nice way:

- ♦ **For Crypto Faucets Users** : to learn about Dapp mechanisms and to get access to DeFi opportunities without paying high fee.
- ♦ **For Crypto Faucets Owners** : to take a step towards decentralization by integrating DeFi features to their website.

**M4DCAT Token (MCT)** is the very first token who permits users to learn about DeFi while receiving Bonuses on a crypto faucet like **Final Autoclaim**.

#### **4- Towards a cross-chain environment**

The smart chain binance is a good way to introduce people to the deFi, but the costs remain relatively high, especially when it comes to making micro payments, this is the case of crypto-faucets as well as all the semi-centralized Micro-Earning crypto services.

If we want to be totally free of centralized systems (mysql, RESTful API ect) in the world of micropayment, we need a blockchain capable of performing transactions almost instantly and with lower costs.

Futhermore, a Cross-Chain Environment for a micro earning service can bring a lot of simplicity to the user, especially when the service offers many crypto tokens to earn, it can avoid having to enter many addresses to withdraw his funds. For example, instead of having to enter the addresses of the native DOGE, BTC and ETH networks, the user will just have to enter his Binance Smart Chain (or Tron, Ethereum, Polygon..) address and will be able to make all his withdrawals on it.

**M4DCAT Token will be available on different blockchains in the future, to allow thirdparties to find the best technology for their business and to improve crypto faucets users experience by permitting the transfer of all cryptocurrencies to one or twopublic address(es).**

# Use Cases

## 1- M4DCAT as official Final Autoclaim's Utility Token.

Final Autoclaim is a famous crypto earning website which allows users to earn up to 50 different cryptocurrencies. With around 300.000 members, Final Autoclaim offers many different ways to earn cryptocurrencies, including surveys, staking, app-installations and video-watching.

Many of M4DCAT use-cases will be implemented to Final Autoclaim in the future.

### Available Features

- ◆ Autoclaim reward bonus (from 2% to a 100%) for each M4DCAT Token on-chain
- ◆ Holders Staking reward bonus (from 0.5% to 20%) for each M4DCAT Token on-chain
- ◆ Holders Roll Game reward bonus (from 2% to 100%) for M4DCAT-BNB LP tokens Holders
- ◆ Offers and Surveys reward bonus (from 0.5 to 20%) for M4DCAT-BNB LP tokens Holders

### Features Roadmap

- ◆ Exclusive M4DCAT flexible staking / interests Pools
- ◆ Exclusive M4DCAT roll game faucet
- ◆ Discounts for Banners and Pay-To-Click advertisers buying campaigns with M4DCAT
- ◆ Discounts for Silver, Gold and Platinum Memberships bought with M4DCAT
- ◆ M4DCAT distributions to Daily and Weekly COntest Winners
- ◆ M4DCAT utilized to paid Blockchain withdrawals fee
- ◆ M4DCAT utilized on Items and Referrals Marketplaces

## 2- M4DCAT Liquidity Mining

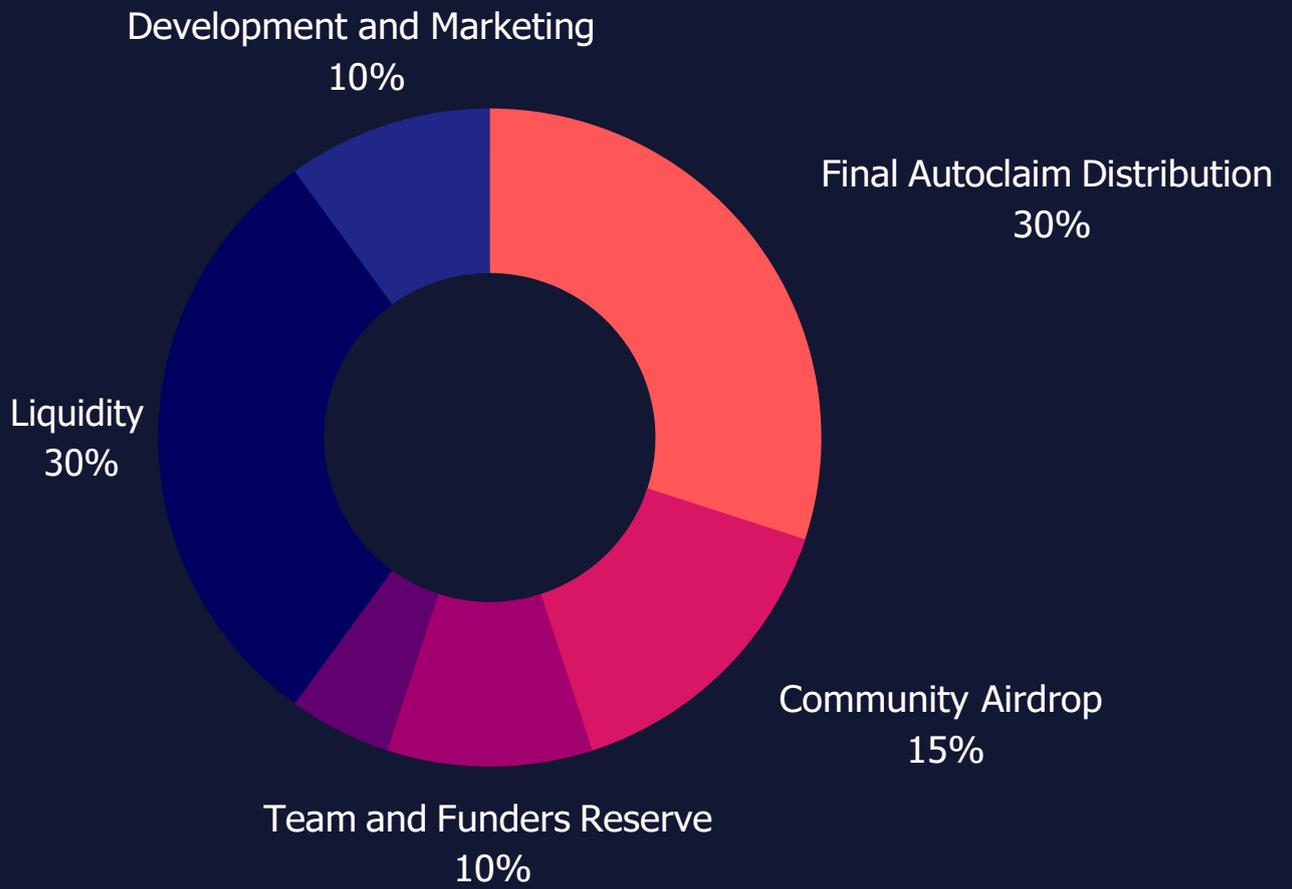

As a liquidity provider, you will receive M4DCAT Tokens from the exchange contract that you can then later use to withdraw your funds from the liquidity pool. As long as you have cryptocurrencies in the liquidity pool, you'll receive part of the fee paid by traders when they trade coins.

The fee is added to the liquidity pool and distributed proportionally to all current liquidity providers.

As Liquidity Pools make trading on DEX possible, anyone can become a liquidity provider as long as they can supply an equal amount of both BNB/BUSD and M4DCAT to an exchange contract on PancakeSwap.

# Tokenomics

# Reward & Burning Emission

- **4%** of each on-chain transactions is given to M4DCAT Token holders
- **1%** is burned in order to make this token deflationary
- **1%** is sent to a charity wallet for later distribution to CryptoJob project

# Milestones

1st Airdrop Done

2000 Twitter and Telegram Members

Integration to Final Autoclaim and Holders Bonuses

More Agressive Marketing

Listing on CoinMarketCap and P2PB2B

# Roadmap

## 1- Short Term Roadmap

## 2- Long Term Roadmap

**April 2021**

Token and Website Launch

**May 2021**

Integration to Final Autoclaim  
& Airdrop Distibrutions

**June 2021**

- ◆ M4DCAT Staking & Holder Bonuses on Final Autoclaim
- ◆ Listing on P2PB2B

**Summer 2021**

- ◆ Contract Audits and Social Bots Developement
- ◆ Beta API for crypto faucets

**October 2021**

Listing on other DEX / CEX

**End 2021**

- ◆ M4DCAT NFT Marketplace
- ◆ Public API for crypto faucets

**January 2022**

M4DCAT Swap and DAO
